SUMMARY

I'm an experienced **Data and Machine Learning** professional with a deep interest in transforming data into meaningful insights. Over the years, I've worked with **Python**, **Power BI, SQL**, and various **ML models** to solve real-world business problems. I love exploring data patterns, building predictive models, and turning analytical findings into strategies that help businesses grow.

EDUCATION

Begum Rokeya University, Rangpur — Sep 2023 - Present

Rangpur,Bangladesh

Bachelor of Science (Honors) - Statistics; GPA: 3.55(3rd Year)

Savar Model College — Jun 2019 – Dec 2021

Savar,Dhaka

Higher Secondary Certificate (**HSC**) - Science; GPA: 5.00

EXPERIENCE

Research Assistant Intern — Oct 2025 – Present

Gira *(Remote)*

- Supported research projects focused on developing and evaluating machine learning algorithms for predictive and classification tasks.
- Collected, cleaned, and preprocessed large datasets using **Python (pandas, NumPy)** to ensure accuracy and reliability in experimental results.
- Implemented supervised and unsupervised learning models (e.g., **regression, clustering, neural networks**) using frameworks such as scikit-learn and TensorFlow.
- Performed model evaluation using key metrics like **accuracy, precision, recall, and F1-score**, and optimized hyperparameters to enhance performance.

Data Visualization & Integration Specialist — May 2025 – Present

Info Logic Solutions *(Part-Time|Remote)*

- Building dashboards and reports using **Power BI** and **Looker Studio** . Integrating and managing datasets using Google BigQuery, **SQL**, and other platforms.
- Collaborating with internal teams to meet reporting needs and business objectives. Ensuring accuracy, performance, and security of data infrastructure.
- Handled client requirements, provided **custom BI solutions**, and supported **data-driven decision processes**.

Freelance Data Analyst — May 2025 – Present

Upwork

- Worked with clients to understand business requirements and translate them into actionable data insights. Collected, cleaned, and analyzed datasets using **Excel** to identify trends, patterns, and key metrics.
- Designed and developed interactive **Power BI dashboards** and reports to support decision-making.Prepared detailed visualizations and summaries for client presentations, ensuring clarity and actionable insights.

SKILL

- **BI & Reporting:** Excel, Power BI, Google Looker Studio
- **Analytics:** Python, Data Mining, NLP, Trend & Root Cause Analysis
- **ML & AI Tools:** TensorFlow, Scikit-learn, SMOTE, PCA

- **Statistics:** Descriptive/Inferential Analysis, Regression, Classification, Time Series
- **Databases:** MySQL, MSSQL
- **Validation:** A/B Testing, ROC-AUC, Precision/Recall, F1 Score
- **Soft Skills:** Strategic Thinking, Problem Solving, Stakeholder Engagement

PROJECTS

Business Insights 360- Brick & mortar and e-commerce [Power BI | SQL | Excel | Dax Studio] LINK

- Developed a Power BI dashboard for AtliQ Hardwares, integrating sales data from Excel/CSV and a SQL database, to analyze $10M+ in sales, optimize with DAX Studio for a 5% performance boost enhancing decision-making.
- The dashboard featured Finance, Sales, Marketing, Supply Chain, and Executive views, providing real-time insights on key metrics like total sales, profit margins (20%), and net profit percentage (15%).
- Optimized for speed and accuracy (90%+ in predictions), it helped AtliQ drive data-driven decisions and enhance operational

Ecommerce Customer Behaviour Analysis |LINK

- Utilized DAX formulas, Data modeling, and Power Query to create interactive dashboards and uncover actionable insights.
- Analyzed customer behavior, revealing 33.48% purchases via desktop, 33.74% via mobile, and 32.78% via tablet devices. • Uncovered location-based trends, with Dhaka leading in average sales and delivery efficiency.
- Demonstrated that 51.69% of return customers left high review scores (5/5), driving loyalty insights.

Ferns and Patel Sales Analysis | LINK

- XLOOKUP, VLOOKUP, Pivot Tables, Power Query, and Power Pivot for advanced analysis.
- Identified top 5 products contributing 70% of total sales.
- Highlighted evening hours driving 40% of daily sales.
- Designed interactive dashboards with slicers for real-time filtering and decision-making.
